1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/4/08 has been entered.

2. Claims 1, 2, 4 to 7, 18 and 19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. This rejection is maintained from the previous office action.

Applicants merely state that they disagree with the Examiner's understanding of excess as disclosed in the original specification and found in the previously presented claims but they do not elaborate upon this nor do they cite any support for their position that the excess is a stoichiometric excess. The Examiner notes that page 14 specifically refers to parts by weight on Table 1 and an excess of amine, as shown in Table 1. It directly follows then that the excess is intended to be parts by weight. Even if applicants were to show that some/all of the examples in Table 1 inherently had a stoichiometric excess, it does not follow that the specification as a whole enables a composition in which all amines must be present in a stoichiometric excess. Note for instance that the breadth of this embraces any and all stoichiometric excess, which clearly is not shown in Table 1.

With regard to applicants' position on the reaction product not being an intermediate, on one hand, the Examiner notes that this directly contradicts the term prepolymer and the future intended use of the claims (chain extender for silicone modified polyurea) which clearly indicates that the reaction product *is* an intermediate in the formation of a polyurea final product. On the other hand, it is well established in patent law that one

cannot simply import negative limitations from the prior art to “get around” the prior art. The mere absence of a positive recitation is not basis for an exclusion.

As such this rejection is maintained.
